bvc nuam

At the end of June, **the MSCI COLCAP** stood at 2,269, that is, 31 points below analysts' forecast (2,300). By the end of July, the index is expected to reach a level of 2,293.

In July, the **One-Year Confidence Index** stood at 81%, which represents a decline of 7 percentage points relative to the previous month (88%) and a decrease of 3 percentage points compared to the same month in 2025 (84%). This indicates that the share of analysts expecting an appreciation of the COLCAP over the next 12 months declined relative to the previous month and year.

The **Buy-on-Dips Confidence Index** stood at 42.9% in July, declining by 7.1 percentage points compared to the previous month (50%) and by 19.6 percentage points relative to the same month in 2025 (62.5%). This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be less likely compared to both the previous month and the previous year.

In July, the **Crash Confidence Index** stood at 46.7%, which represents a decline of 12.1 percentage points compared to the previous month (58.8%) and 15.8 percentage points relative to the same month in 2025 (62.5%). This indicates that analysts perceive the local market as more vulnerable to declines in international markets compared to the previous month and year.

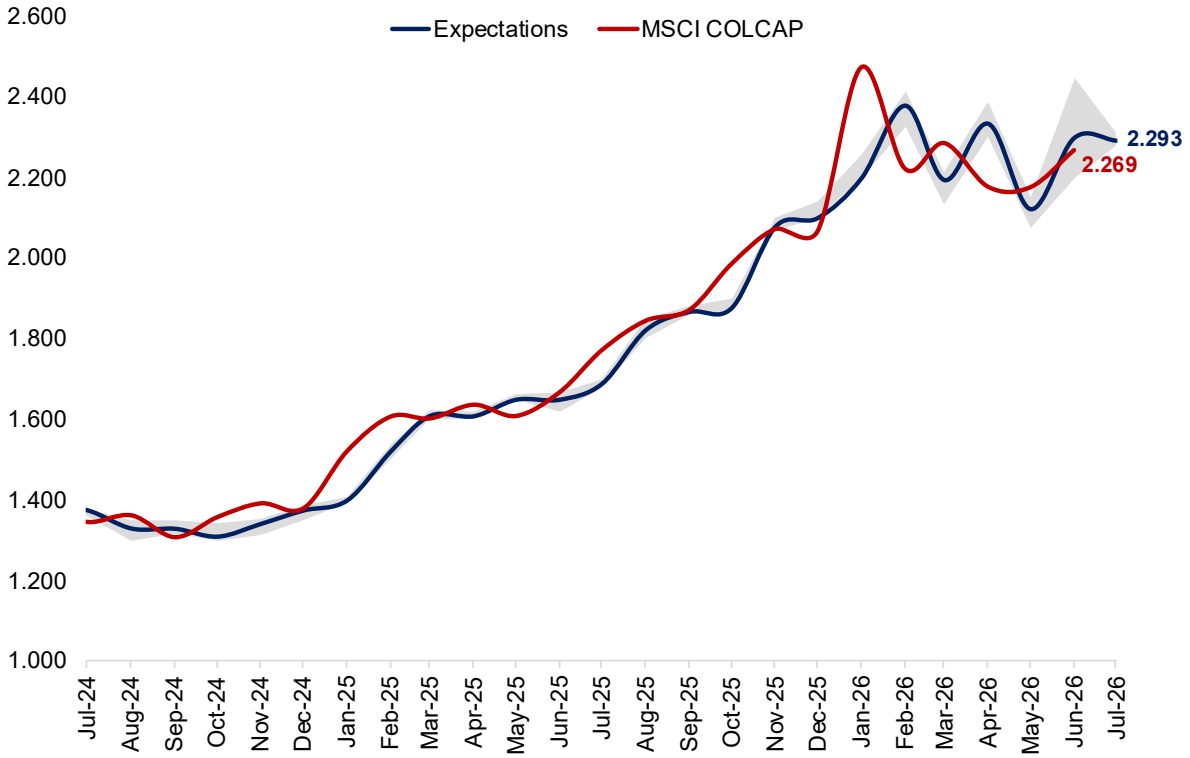

Finally, the **Valuation Confidence Index** stood at 70.5% in July, increasing by 3 percentage points compared to the previous month (67.5%), but declining by 19 percentage points relative to the same month in 2025 (89.5%). This implies that, compared to the previous month, a larger share of analysts believes that stock prices underestimate their fundamentals, but a smaller share compared to the previous year.

MSCI COLCAP Index

The MSCI COLCAP Index, which reflects price movements of the most liquid stocks on the Colombian Stock Exchange (bvc), is one of the most important leading indicators for monitoring the country's capital market. The average for July 2026 to date (through July 17) stands at 2,291, representing a decline of 0.9% relative to the June 2026 average (2,311), but an appreciation of 33.8% compared to the July 2025 average (1,713).

At the end of June, the MSCI COLCAP stood at 2,269, which corresponds to 31 points below analysts' forecast (2,300). By the end of July, the index is expected to increase to 2,293 as the median response, within a range between 2,280 and 2,315 (Chart 1).

One-Year Confidence Index[2]

The One-Year Confidence Index measures the share of analysts who expect the MSCI COLCAP to increase over a one-year horizon. In this edition, the index stood at 81%, indicating that this percentage of respondents expects the index to rise in July 2027 relative to its level prior to the survey being sent (2,293) (Chart 2). The index declined by 7 percentage points compared to the previous month (88%) and by 3 percentage points relative to the same month of the previous year (84%), reflecting a decline in equity market confidence compared to both the previous month and the previous year.

[2] The One-Year Confidence Index is calculated as the number of respondents that establish a price for the MSCI COLCAP index in 12-months higher than the current level of the index, divided by the total responses excluding invalid answers.

Buy-on-Dips Confidence Index[3]

The Buy-on-Dips Confidence Index measures the share of analysts who believe the MSCI COLCAP could recover one day after a hypothetical 3% drop. In July 2026, the index stood at 42.9%, declining by 7.1 percentage points compared to the previous month (50%) and by 19.6 percentage points relative to the same month in 2025 (62.5%) (Chart 3). This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be less likely compared to both the previous month and the previous year.

[3] The Buy-on-Dips Confidence Index is calculated as the number of respondents who expect an increase in the MSCI COLCAP index the next day after a 3% drop, divided by the total answers excluding the "no opinion" option.

Crash Confidence Index[4]

The Crash Confidence Index shows the share of analysts who believe the Colombian equity market would face a low probability of a depreciation in the MSCI COLCAP over the next six months in the event of a sharp drop in international markets. In July 2026, the index declined by 12.1 percentage points relative to the previous month (58.8%), standing at 46.7%, indicating that analysts perceive a higher likelihood of a potential decline in the local equity market amid deteriorating international conditions compared to June 2026 (Chart 4). Compared to the same month in 2025 (62.5%), the index stood 15.8 percentage points lower, reflecting a decline in confidence in the equity market's immunity to external shocks.

Source: Financial Opinion Survey, Fedesarrollo – bvc.

[4] The Crash Confidence Index is calculated as the number of responses who attach a probability between 0% and 25% to a stock market crash in the next six months including the case that a crash occurred in the international markets and spreads to Colombia, divided by the total responses excluding the "does not apply" option.

Valuation Confidence Index[5]

The Valuation Confidence Index measures the share of analysts who consider MSCI COLCAP stock prices to be very low or fair relative to their fundamental value. In July 2026, the index stood at 70.5%, increasing by 3 percentage points compared to the figure observed in June (67.5%), but declining by 19 percentage points relative to the level of July 2025 (89.5%). This suggests that, compared to the previous month, a larger share of analysts believes that stock prices underestimate their fundamentals, but a smaller share compared to the previous year (Chart 5).

[5] The Valuation Confidence Index is calculated as:
$Valuation\ Confidence\ Index = (1 * (\%\ too\ low)) + (0.5 * (\%\ about\ right))$, where % too low and % about right, correspond respectively to the number of analysts who chose that the values of the local stocks are too low and about right in regard of the fundamental value excluding the option "do not know".
