At the end of July, the **MSCI COLCAP** stood at 2,392, that is, 99 points above analysts' forecast (2,293). By the end of August, the index is expected to reach a level of 2,400.

In August, the **One-Year Confidence Index** stood at 95.2%, which represents an increase of 14.2 percentage points relative to the previous month (81%) and an increase of 9 percentage points compared to the same month in 2025 (86.2%). This indicates that the share of analysts expecting an appreciation of the COLCAP over the next 12 months increased relative to both the previous month and the previous year.

The **Buy-on-Dips Confidence Index** stood at 56.3% in August, increasing by 13.4 percentage points compared to the previous month (42.9%), but declining by 3.7 percentage points relative to the same month in 2025 (60%). This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be more likely compared to the previous month, but less likely compared to the previous year.

In August, the **Crash Confidence Index** stood at 75%, which represents an increase of 28.3 percentage points compared to the previous month (46.7%) and 18.7 percentage points relative to the same month in 2025 (56.3%). This indicates that analysts perceive the local market as less vulnerable to declines in international markets compared to both the previous month and the previous year.

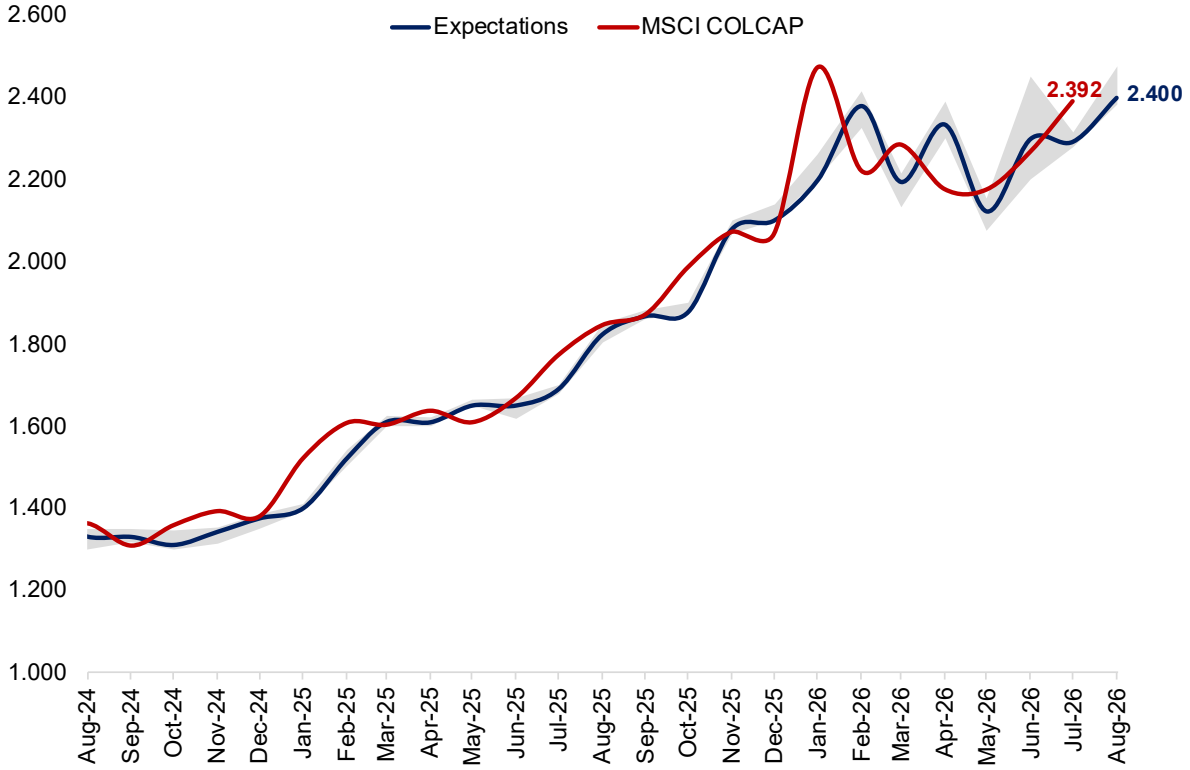

Finally, the **Valuation Confidence Index** stood at 71.4% in August, increasing by 0.9 percentage points compared to the previous month (70.5%), but declining by 5.1 percentage points relative to the same month in 2025 (76.5%). This implies that, compared to the previous month, a larger share of analysts believes that stock prices underestimate their fundamentals, but a smaller share compared to the previous year.

MSCI COLCAP Index

The MSCI COLCAP Index, which reflects price movements of the most liquid stocks on the Colombian Stock Exchange (bvc), is one of the most important leading indicators for monitoring the country's capital market. The average for August 2026 to date (through August 14) stands at 2,396, representing an increase of 4.2% relative to the July 2026 average (2,299) and an appreciation of 31.4% compared to the August 2025 average (1,824).

At the end of July, the MSCI COLCAP stood at 2,392, which corresponds to 99 points above analysts' forecast (2,293). By the end of August, the index is expected to increase to 2,400 as the median response, within a range between 2,384 and 2,475 (Chart 1).

One-Year Confidence Index[2]

The One-Year Confidence Index measures the share of analysts who expect an increase in the MSCI COLCAP over a one-year horizon. In this edition, the index stood at 95.2%, indicating that this percentage of respondents expects the index to increase in August 2027 relative to its level prior to the survey being sent (2,373)1 (Chart 2). The index increased by 14.2 percentage points compared to the previous month (81%) and by 9 percentage points relative to the same month of the previous year (86.2%), reflecting an increase in equity market confidence compared to both the previous month and the previous year.

[2] The One-Year Confidence Index is calculated as the number of respondents that establish a price for the MSCI COLCAP index in 12-months higher than the current level of the index, divided by the total responses excluding invalid answers.

Buy-on-Dips Confidence Index[3]

The Buy-on-Dips Confidence Index measures the share of analysts who believe the MSCI COLCAP has the ability to recover one day after a hypothetical 3% drop. In August 2026, the index stood at 56.3%, increasing by 13.4 percentage points compared to the previous month (42.9%), but declining by 3.7 percentage points relative to the same month in 2025 (60%) (Chart 3). This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be more likely compared to the previous month, but less likely compared to the previous year.

[3] The Buy-on-Dips Confidence Index is calculated as the number of respondents who expect an increase in the MSCI COLCAP index the next day after a 3% drop, divided by the total answers excluding the "no opinion" option.

Crash Confidence Index[4]

The Crash Confidence Index shows the share of analysts who believe the Colombian equity market would face a low probability of a depreciation in the MSCI COLCAP over the next six months in the event of a sharp drop in international markets. In August 2026, the index increased by 28.3 percentage points compared to the previous month (46.7%), standing at 75%, indicating that analysts perceive a lower likelihood of a potential decline in the local equity market amid deteriorating international conditions compared to July 2026 (Chart 4). Compared to the same month in 2025 (56.3%), the index stood 18.7 percentage points higher, reflecting an increase in confidence in the equity market's immunity to external shocks.

[4] The Crash Confidence Index is calculated as the number of responses who attach a probability between 0% and 25% to a stock market crash in the next six months including the case that a crash occurred in the international markets and spreads to Colombia, divided by the total responses excluding the "does not apply" option.

Valuation Confidence Index[5]

The Valuation Confidence Index measures the share of analysts who consider MSCI COLCAP stock prices to be very low or fair relative to their fundamental value. In August 2026, the index stood at 71.4%, increasing by 0.9 percentage points compared to the figure observed in July (70.5%), but declining by 5.1 percentage points relative to the level of August 2025 (76.5%). This suggests that, compared to the previous month, a larger share of analysts believes that stock prices underestimate their fundamentals, but a smaller share compared to the previous year (Chart 5).

[5] The Valuation Confidence Index is calculated as:
$Valuation\ Confidence\ Index = (1 * (\%\ too\ low)) + (0.5 * (\%\ about\ right))$, where % too low and % about right, correspond respectively to the number of analysts who chose that the values of the local stocks are too low and about right in regard of the fundamental value excluding the option "do not know".
