bvc nuam

At the end of December, the **MSCI COLCAP** stood at 2,068, that is, 33 points below analysts' forecast (2,101). By the end of January, the index is expected to reach a level of 2,200.

In January, the **One-Year Confidence Index** stood at 90.9%, which represents an increase of 5.2 pp relative to the previous month (85.7%) and a rise of 18.9 pp compared to the same month in 2025 (72%). This indicates that the share of analysts expecting an appreciation of the COLCAP over the next 12 months increased relative to both the previous month and the previous year.

The **Buy-on-Dips Confidence Index** stood at 73.3% in January, increasing by 23.3 pp compared to the previous month (50%), while remaining unchanged relative to the same month in 2025. This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be more likely compared to the previous month, but equally likely compared to the previous year.

In January, the **Crash Confidence Index** stood at 61.1%, which represents a decline of 10.3 pp compared to the previous month (71.4%), but an increase of 7.8 pp relative to the same month in 2025 (53.3%). This indicates that analysts perceive the local market as less vulnerable to declines in international markets compared to the previous month, but more vulnerable compared to the previous year.

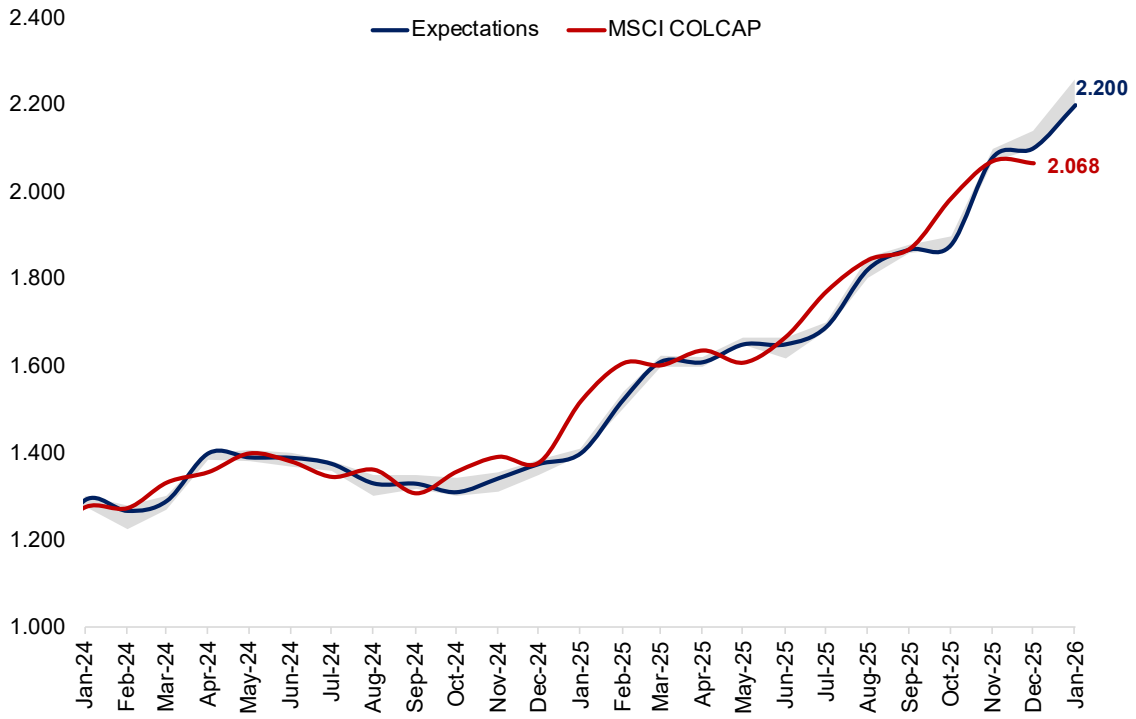

Finally, the **Valuation Confidence Index** stood at 71.4% in January, increasing by 4.8 pp relative to the previous month (66.7%), but declining by 20.7 pp compared to the same month in 2025 (92.1%). This implies that, relative to the previous month, a larger share of analysts believes that stock prices underestimate their fundamentals, but a smaller share compared to the same month of the previous year.

MSCI COLCAP Index

The MSCI COLCAP Index, which reflects price movements of the most liquid stocks on the Colombian Stock Exchange (bvc), is one of the most important leading indicators for monitoring the country's capital market. The average for January 2026 to date (through January 16) stands at 2,208, representing an appreciation of 5.7% relative to the December 2025 average (2,090) and an increase of 55.2% compared to the January 2025 average (1,423).

At the end of December, the MSCI COLCAP stood at 2,068, which is 33 points below analysts' forecast (2,101). By the end of January, the index is expected to rise to 2,200 as the median response, within a range between 2,200 and 2,260 (Chart 1).

One-Year Confidence Index[2]

The One-Year Confidence Index measures the share of analysts who expect the MSCI COLCAP to increase over a one-year horizon. In this edition, the index stood at 90.9%, indicating that this percentage of respondents expects the index to rise in January 2026 relative to its level prior to the survey being sent (2,187)[3] (Chart 2). The index increased by 5.2 pp compared to the previous month (85.7%) and by 18.9 pp compared to the same month of the previous year (72.0%), reflecting an improvement in equity market confidence compared to both the previous month and the previous year.

Buy-on-Dips Confidence Index[4]

The Buy-on-Dips Confidence Index measures the share of analysts who believe the MSCI COLCAP has the ability to recover one day after a hypothetical 3% drop. In January 2026, the index stood at 73.3%, representing an increase of 23.3 pp compared to December (50%), while remaining unchanged relative to the same month in 2025 (Chart 3). This suggests that analysts consider a recovery of the MSCI COLCAP following a potential drop in the index to be more likely compared to the previous month, but equally likely compared to the previous year.

[4] The Buy-on-Dips Confidence Index is calculated as the number of respondents who expect an increase in the MSCI COLCAP index the next day after a 3% drop, divided by the total answers excluding the "no opinion" option.

Crash Confidence Index[5]

The Crash Confidence Index shows the share of analysts who believe the Colombian equity market would face a low probability of a depreciation in the MSCI COLCAP over the next six months in the event of a sharp drop in international markets. In January 2026, the index declined by 10.3 pp relative to the previous month's result (71.4%), standing at 61.1%, indicating that analysts perceive a higher probability of a potential decline in the local equity market amid deteriorating international markets compared to December 2025 (Chart 4). Meanwhile, the index stood 7.8 pp above the figure recorded in the same month of the previous year (53.3%), reflecting an improvement in confidence regarding the equity market's immunity to external shocks relative to January 2025.

[5] The Crash Confidence Index is calculated as the number of responses who attach a probability between 0% and 25% to a stock market crash in the next six months including the case that a crash occurred in the international markets and spreads to Colombia, divided by the total responses excluding the "does not apply" option.

Valuation Confidence Index[6]

The Valuation Confidence Index measures the share of analysts who consider MSCI COLCAP stock prices to be very low or fair relative to their fundamental value. In January 2026, the index stood at 71.4%, increasing by 4.8 pp relative to the figure observed in December (66.7%), but declining by 20.7 pp from the level of January 2025 (94.1%). This indicates that, compared to the previous month, a larger share of analysts believe that stock prices underestimate their fundamentals, but a smaller share compared to the previous year (Chart 5).

[6] The Valuation Confidence Index is calculated as:
$Valuation\ Confidence\ Index = (1 * (\%\ too\ low)) + (0.5 * (\%\ about\ right))$, where % too low and % about right, correspond respectively to the number of analysts who chose that the values of the local stocks are too low and about right in regard of the fundamental value excluding the option "do not know".
